Warranty Nexus

A Workflow Automation Solution
Make it easier to do business with your company

Typically, Warranty Management Systems are pieced together over time.

Warranty management systems grow as product lines are expanded, new dealer channels are added, and manufacturing is diversified. These gradual enhancements can result in fragmented communication, which decreases efficiency and customer satisfaction.

Enhance your digital experience with Warranty Nexus, a full life-cycle Business Process Automation solution.

Warranty Nexus streamlines workflows and connects critical parties in the warranty lifecycle. In doing so, it acts as a centralized hub to process, communicate, inform, and gain intelligence that is crucial in improving product quality and customer experience.

Case Study Cost Benefit Analysis

$1M	**46%**	**41%**
saved over the first 4 years	gain in productivity	decrease in claim cost
