

Inspection Management

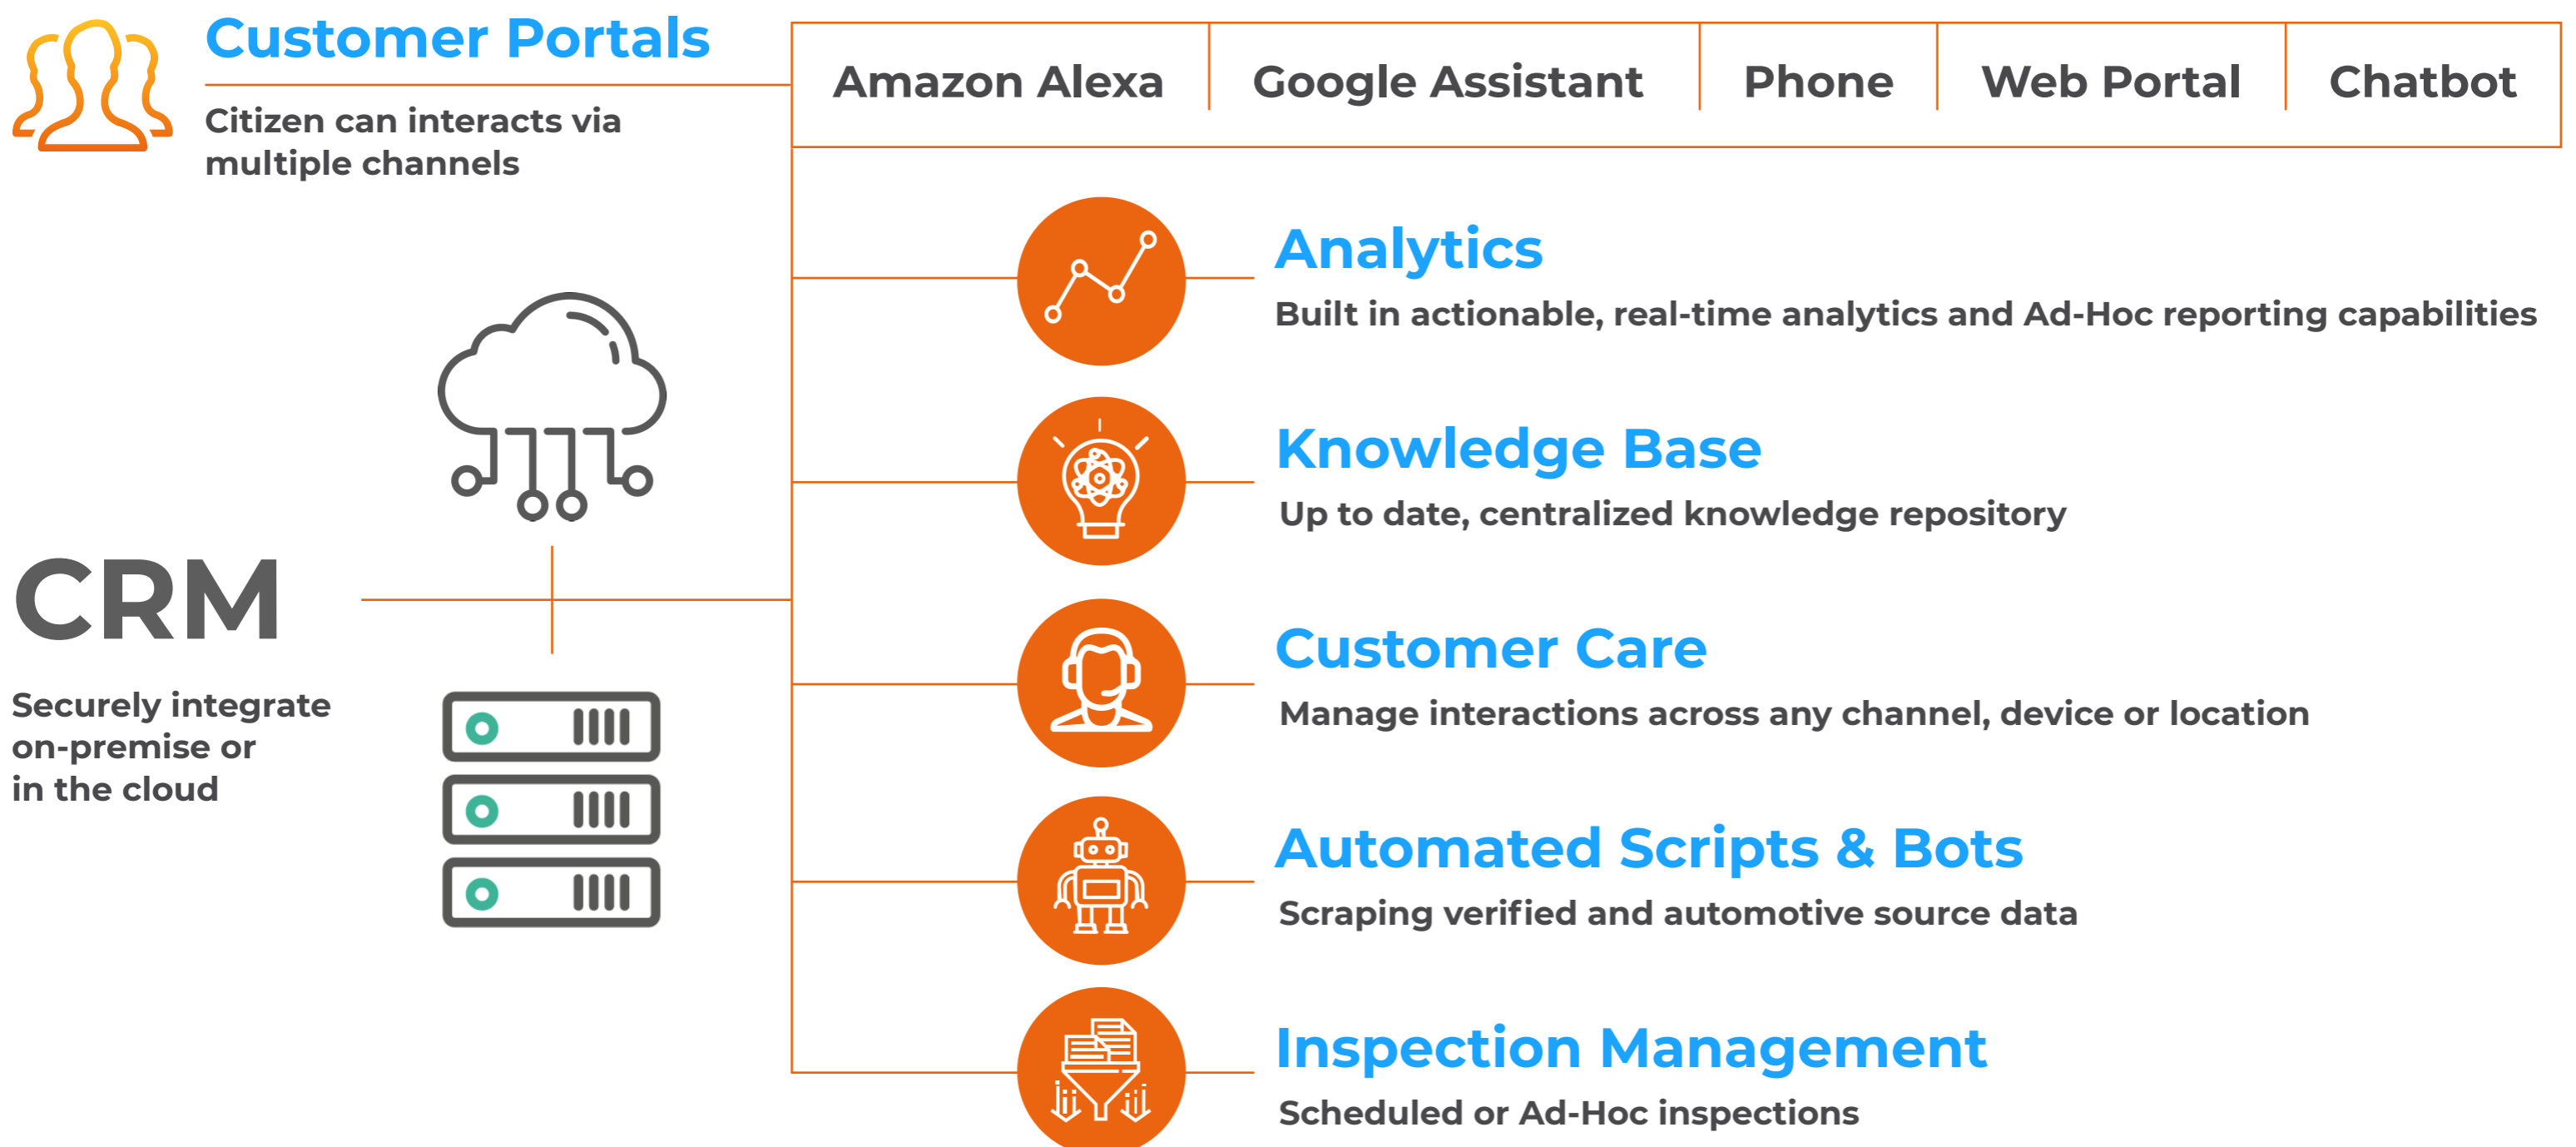

Overview

Speridian has created a **Monitoring** and **Inspection** solution built with the same underlying technology that cities like **Phoenix** and **Toronto** rely on. Created to help state and local agencies manage the high demand for **safety inspections**, our solution provides inspectors with the capability to **track, monitor, and report** on **complaints, inspections, and violations**.

Leveraging the latest Cloud Technologies, and integrating with modern digital channels, including voice enabled platforms, Speridian provides a state-of-the-art Interaction solution that is flexible, scalable and robust.

Monitoring & Inspection

- Centralized Knowledge base, accessible to residents, case officers and inspectors
- Intuitive and personalized engagement channels leveraging the latest intelligent interaction channels.
- Interact using voice enable devices such as Alexa/Google to search for knowledge articles, specially designed to provide senior citizens and easy & convenient access to information.
- Policy driven inspections, scorings and case management, with an intuitive inspectors' interface.
- Actionable insights at your fingertips.
- Ability to perform Remote Inspections.

Benefits

Our **intuitive Inspection management solution** is designed to provide organizations with the ability to carry out planned and un-planned inspections ensuring efficiency and **integrated data collection** to provide **actionable insights** and case management capabilities.
